MATEMAFIJA

No available charging point. What now?

Vilnius EV Charging Policy Lab

Halina and Gleb
Applied Mathematics, VILNIUS TECH

Challenge 13

Availability is uneven

2.8M+

OCPI status observations

2,100+ current EVSE records at locations marked Vilnius

Public records show EVSE status and tariffs

No physical queue or individual waiting time

A balanced contribution-to-credit policy

01 → **02** → **03** → **04**

01 detect sustained scarcity

02 create a small capped contribution

03 fund credits from the shared pool

04 offer a practical less-crowded alternative

Transparent assumptions, measurable pilot

OBSERVED EVIDENCE

- Station status
- Time
- Tariffs

ASSUMED & SIMULATED

- Release response
- Alternative-site choice
- Credit response

FOUR SAFEGUARDS

System safety	Redistribution fairness	User proxy	Accounting integrity

KPI

Qualified zero availability falls without increasing scarcity at receiver stations

Drivers benefit; CPO and the city use the policy lab.

Real evidence, clear boundary

Real OCPI and DATEX II records

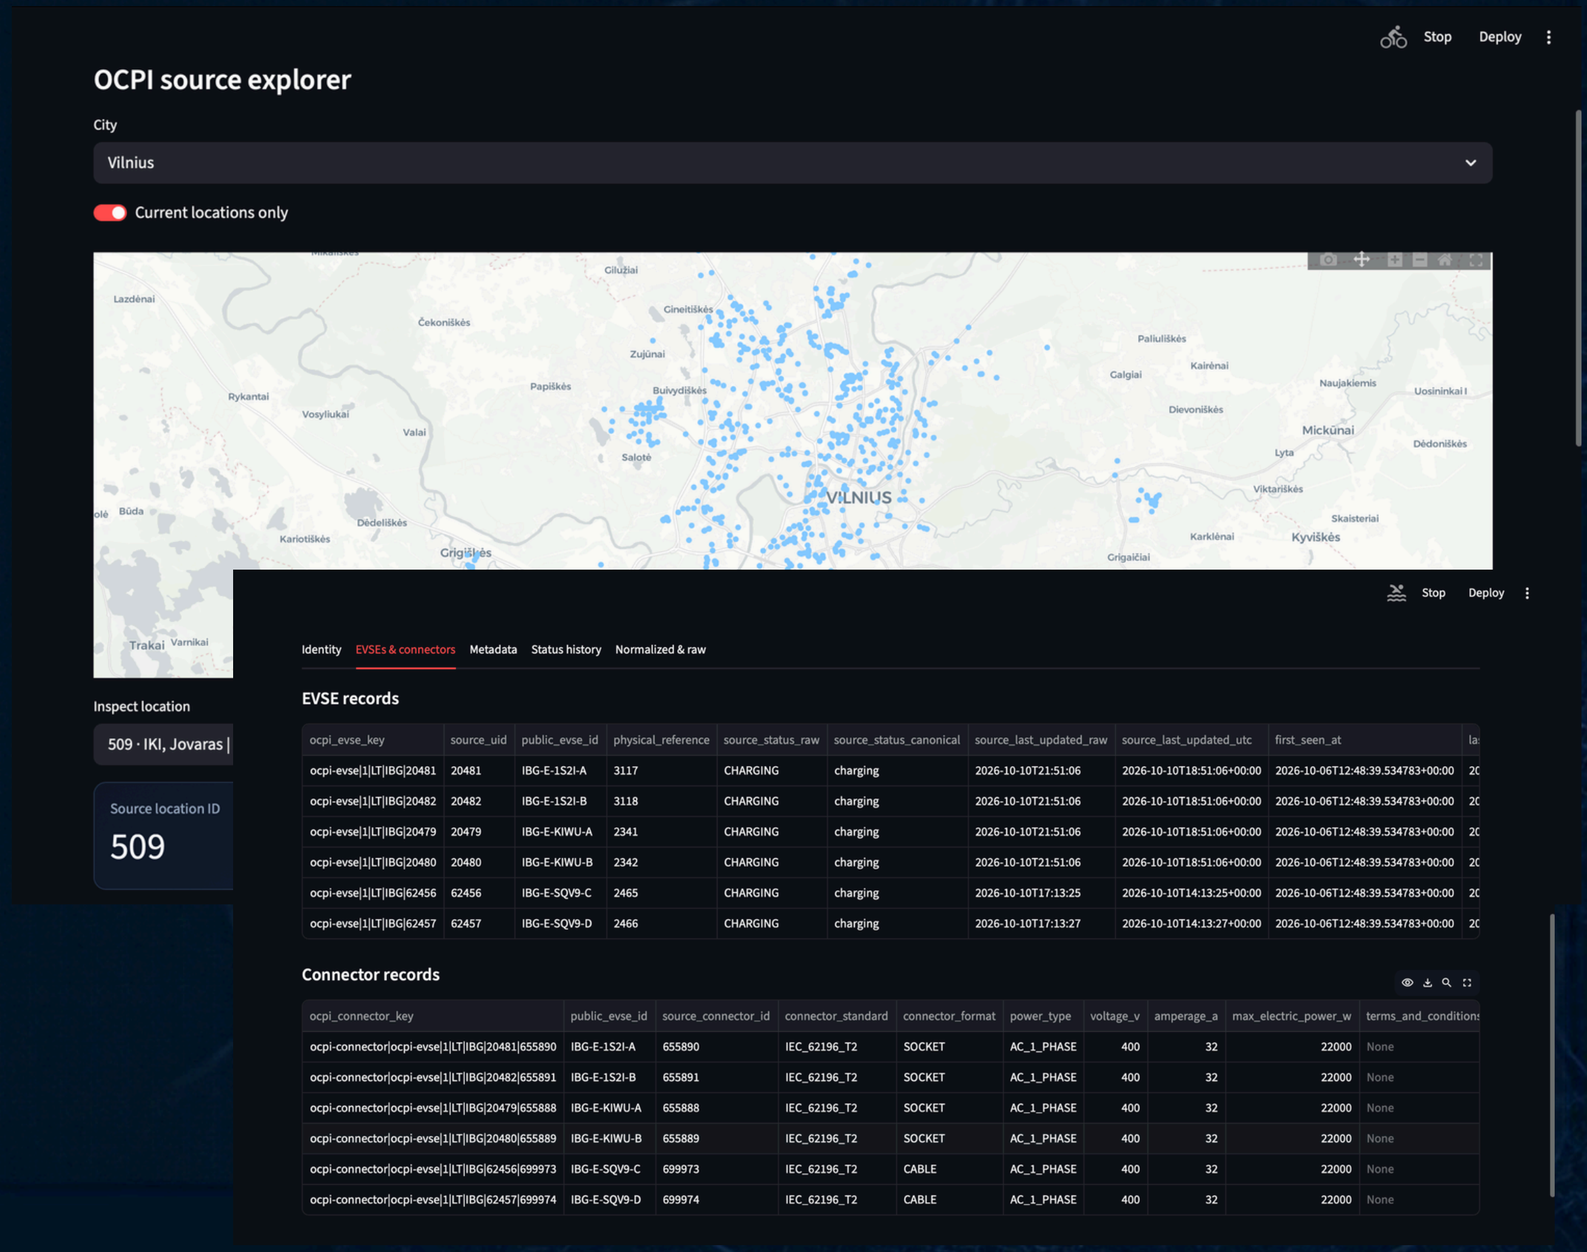

Real source records

Equipment faults separated from scarcity

Auditable timestamps and tariffs

4+ days collected, 7 required

Illustrative stress test
until the history gate passes

Policy mechanism under stress

01 **Bounded OSA signal**

OSA cap: EUR 0.05 per minute

↓

02 **Visible behavioural assumptions**

Assumed release and receiver-choice response

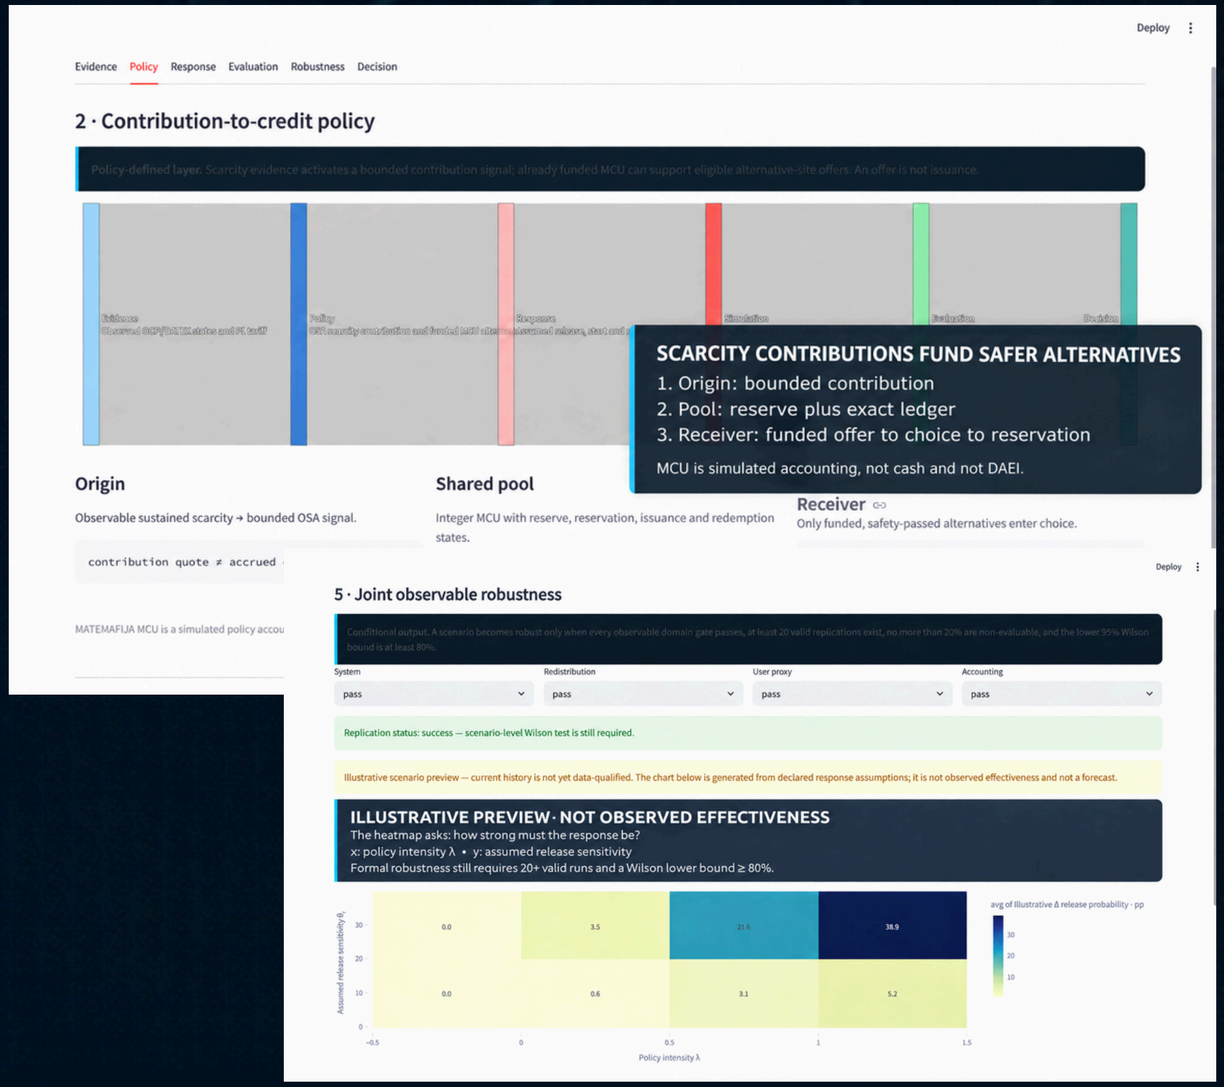

↓

03 **Paired scenario evaluation**

Funded MCU ledger and receiver capacity

Illustrative response surface, not measured effectiveness

Illustrative preview only

A bounded Vilnius pilot

Qualified sites with a CPO partner
deliver a real, measurable test

Measure release, receiver choice
and fundability

Scale only if all four safeguards pass
reduce qualified zero availability without worsening receiver scarcity

City and operator pilot now
session/CDR evidence and privacy-safe choice measurements

DAEI integration is a future path
kept separate from MCU today

OUR KPI

Reduce qualified zero availability

without worsening receiver scarcity
